

Warm it up before starting!

In the cold environments, whenever your machine has been parked for a long period of time, some of the systems will cool to below standard operating temperatures.

Therefore it's highly suggested, to avoid unforeseen damages, to warm up the machine systems before starting with the operations.

If the engine, transmission and hydraulic oils are not warmed up completely, their viscosity will not reach the lubrication volume that is required and, in the long run, this might result in damage of engine valve control components, possible appearance of air bubbles and cavitation in the hydraulic pumps, plus negative impact on the environment.

In addition, to reach an high productivity level, the operator comfort is also very important, so the cabin as well should be warmed.

HEATER SET DESCRIPTION	PROMOTION QTY
Engine oil heater assy	1 pc
Transmission oil heater assy	1 pc
Hydraulic oil heater assy	1 pc
Cabin heater assy	1 pc
+	
Layout cabinet assy - outside chassis electrical connection	1 pc

HEATERS SALES CAMPAIGN:

- Order your *Heater set* in December 2020
- Send the lift truck's serial number(s) to your Konecranes distributor for a complete offer of the assys
- Add to your order all the offered parts and take advantage of the special discount
- Use the code "HEATER10" and get an additional 10% discount* on the campaign parts
- Contact your Konecranes distributor or visit [kclifttrucks.com/contact](https://www.kclifttrucks.com/contact) to know more.

*not applied on stock orders or cumulated with other ongoing offers
